# SkyePWA Forge™

Website-as-App Conversion | Installability | Resilience | Update Control

Rate Card Update: +31% uplift applied (Effective February 25, 2026)

Skyes Over London LC delivers PWAs as an engineered product surface - not a design add-on. Every tier below ships an installable, branded app experience across phone and desktop, validated against a defined device matrix with safe update behavior.

## Core outcomes delivered in every build:

- Home-screen install + full-screen launch (no app store required)
- Brand packaging (icons, theme, app identity) with SOL visual discipline
- Offline fallback + resilient load behavior under weak signal
- Controlled updates (cache versioning + 'new version available' prompt)
- QA on real devices + handoff kit for staff and customers

Note: Platform capabilities vary by OS and browser (especially for advanced background behaviors). SOL tiers advanced features (e.g., push) as add-ons and validates against the agreed device matrix.

# Rate Card (All figures reflect +31% uplift)

Investment ranges are USD and depend on site condition, complexity, and required integrations. Taxes and third-party vendor fees are excluded.

| Service Line | What It Covers (Summary) | Investment |
|---|---|---|
| **PWA Readiness Audit (Tier 0)** | Installability audit + baseline scan + conversion blueprint + fixed-price recommendation. 100% credited to build if signed within 14 days. | **$460 - $1,965** |
| **Tier 1 - PWA Conversion** | Installable app experience, offline fallback, safe updates, install UX kit, device QA + handoff. | **$1,965 - $8,515** |
| **Tier 2 - PWA+ Productization** | Tier 1 plus performance upgrades, offline-first tuning, lead/form reliability (retry/failover), basic monitoring & diagnostics. | **$6,550 - $19,650** |
| **Tier 3 - PWA Enterprise Ops** | Tier 2 plus observability pipeline, security hardening review, governance, rollback plan, monthly reporting. | **$15,720 - $45,850 + monthly** |
| **Add-ons** | Optional upgrades priced by scope. | |
| **Add-on - Push Notifications Program** | Permission UX, setup + testing, campaign templates, delivery guidance (capabilities vary by OS/browser). | **$3,275 - $9,825** |
| **Add-on - App Store Packaging (Wrapper + Store Ops)** | iOS/Android packaging, store listing assets, compliance basics, release workflow, update guidance. | **$9,825 - $26,200** |
| **Add-on - Multi-language Install Kit (EN/ES)** | Bilingual install prompts, QR collateral, install landing copy + branded assets. | **$985 - $3,275** |
| **Add-on - Offline Catalog Snapshot Sync** | Offline snapshot for menus/services/catalog-like content, sync rules, degraded-mode UX. | **$6,550 - $23,580** |
| **AppCare** | Monthly lifecycle support and monitoring (recommended for production). | |
| **AppCare Lite (Monthly)** | Updates + minor fixes, quarterly install UX refresh, standard support. | **$260/mo** |

| Service Line | What It Covers (Summary) | Investment |
|---|---|---|
| **AppCare Pro (Monthly)** | Lite plus monitoring thresholds, monthly health report, priority queue. | **$655/mo** |
| **AppCare Elite (Monthly)** | Pro plus performance budget enforcement, quarterly optimization sprint, executive reporting. | **$1,640/mo** |

Audit credit: 100% of Tier 0 is credited to Tier 1-3 if the build agreement is signed within 14 days of audit delivery.
Payment options: 30% deposit, remainder over 6/12 months available for qualifying engagements.

## AE Close Path (Repeatable)

- Sell Tier 0 audit first (low risk, fast proof).
- Deliver blueprint + fixed-price recommendation inside the audit window.
- Convert to Tier 1-3 build using the audit credit as the close lever.
- Attach AppCare for lifecycle stability and monthly revenue.

## Acceptance Criteria (Non-Negotiable)

- Installs successfully on the agreed device matrix (iOS, Android, desktop).
- Launches full-screen from home screen with correct branding.
- Offline fallback renders cleanly and journeys degrade gracefully under weak/no signal.
- Update behavior is safe: versioned cache, predictable refresh prompt, no 'stuck on old build' failure mode.
- Critical conversions (call, map, booking, quote, contact) validate end-to-end.
