

Sovereign Author Publishing OS

Author command infrastructure above retailer lanes

Author: Skyes Over London Imprint: SOLEnterprises

Sovereign Author Publishing OS

Command Position

A single author workspace should write once, package once, sell direct, and release outward from the same control plane.

Why This Lives Inside SuperIDev2

SuperIDev2 now acts as the operator shell for author manufacturing, release proof, storefront launch prep, and outward channel packaging.

Release Spine

- Canonical manuscript source
- Edition lineage
- Direct-sale storefront metadata
- SkyeBlog launch article seeded from the same release

Launch Notes

The strongest lane is the owned direct-sale surface first. The outward channel package remains downstream from the canonical master.
