

SkyeBlog Command

Launch article tied to canonical author package

Author: Skyes Over London Imprint: SkyeBlog

The Author Stack Needs a Sovereign Command Layer

Independent publishing is strongest when the author owns the master release lane instead of renting the truth from outside portals.

What changes

SuperIDEv2 now carries a SkyeDocx Pro manufacturing path and a SkyeBlog editorial path in the same workspace.

Why that matters

One command surface can now prepare manuscript structure, launch editorial, direct-sale framing, and outward export evidence in one sequence.

Release promise

The direct-sale lane goes live first. External channels become deploy targets instead of the source of truth.
