Skyes Over London LC
SOLEnterprises International Nexus & Holdings

WEBSITE-AS-APP | INSTALLABLE | RESILIENT | SAFE UPDATES

SkyePWA Forge™

Turn your website into an installable app experience — branded, fast, and reliable.

Your customers can add your brand to their home screen and open it like a real app — full-screen, on-demand, and engineered for real-world conditions.

Installable App Presence

- Home-screen icon
- Full-screen launch
- Brand identity

Resilience & Speed

- Offline fallback
- Smart caching
- Weak-signal stability

Safe Updates & QA

- Versioned updates
- Refresh prompt UX
- Real-device testing

SkyePWA Forge™ — Deliverables & Acceptance

Client-facing scope (what is shipped, tested, and delivered)

Tier 0 — PWA Readiness Audit (Blueprint)

- Installability readiness scan (manifest, scope, start URL).
- Baseline scan (performance + stability priority findings).
- Risk flags (caching, routing, sessions/auth).
- Critical journey map (call/map/booking/quote/contact).
- Conversion blueprint (steps + fixed-price recommendation).

Tier 1 — PWA Conversion (Standard Build)

- Manifest configured (identity, theme, start URL, scope).
- Icon suite + maskable icons (Android-correct).
- Apple touch icons + launch behavior tuning.
- Service worker with safe caching strategy.
- Offline fallback + resilient degraded-mode behavior.
- Update control (versioned cache + refresh prompt).
- Install UX kit + device QA + handoff package.

Tier 2 — PWA+ Productization (Reliability)

- Performance upgrades (asset optimization + tuned caching).
- Offline-first tuning for key journeys.
- Lead/form reliability improvements (retry/failover).
- Diagnostics signals for client-side stability.
- SEO safety validation.

Tier 3 — Enterprise Ops (Governed Operations)

- Monitoring/observability pipeline (errors + performance thresholds).
- Release governance (cadence, release notes discipline, rollback plan).
- Security posture review (headers + threat surface hardening).
- Monthly health reporting and lifecycle management.

QA Device Matrix + Acceptance Criteria (Shipping Standard)

Minimum device matrix

- iPhone (current iOS major).
- Android (current major) — Chrome.
- Desktop — Chrome.
- Safari (Mac) — basic verification.

Acceptance criteria

- Installs successfully across the agreed device matrix.
- Launches full-screen from home screen with correct branding.
- Offline fallback renders cleanly; weak-signal behavior degrades gracefully.
- Update behavior is safe (versioned cache + predictable refresh prompt).
